3. ID3 DECISION TREE

Question / Python Code

```
from sklearn.datasets import load_iris
from sklearn.tree import DecisionTreeClassifier
d = load_iris()
m = DecisionTreeClassifier(
    criterion='entropy',
    random_state=1
)
m.fit(d.data, d.target)
print(m.predict([[5.1,3.5,1.4,0.2]]))
```
