6. NAIVE BAYES

Question / Python Code

```
from sklearn.datasets import load_iris
from sklearn.naive_bayes import GaussianNB
from sklearn.metrics import accuracy_score, confusion_matrix
d = load_iris()
m = GaussianNB()
m.fit(d.data, d.target)
p = m.predict(d.data)
print("Accuracy:", accuracy_score(d.target,p))
print("Confusion Matrix:")
print(confusion_matrix(d.target,p))
```
