11. CREDIT SCORE CLASSIFICATION

Question / Python Code

```
from sklearn.tree import DecisionTreeClassifier
X = [
[20,20000],
[25,30000],
[35,60000],
[45,90000]
]
y = ['Poor','Poor','Average','Good']
m = DecisionTreeClassifier(random_state=1)
m.fit(X,y)
print(m.predict([[35,60000]]))
```
