15. IRIS USING NAIVE BAYES

Question / Python Code

```
from sklearn.datasets import load_iris
from sklearn.naive_bayes import GaussianNB
d = load_iris()
m = GaussianNB()
m.fit(d.data,d.target)
p = m.predict([[5.1,3.5,1.4,0.2]])
print(d.target_names[p][0])
```
