16. COMPARE CLASSIFICATION ALGORITHMS

Question / Python Code

```
from sklearn.datasets import load_iris
from sklearn.neighbors import KNeighborsClassifier
from sklearn.tree import DecisionTreeClassifier
from sklearn.naive_bayes import GaussianNB
d = load_iris()
models = [
    KNeighborsClassifier(),
    DecisionTreeClassifier(random_state=1),
    GaussianNB()
]
for m in models:
    m.fit(d.data,d.target)
    print(
        type(m).__name__,
        round(m.score(d.data,d.target),2)
    )
```
