18. PERCEPTRON IRIS

Question / Python Code

```
from sklearn.datasets import load_iris
from sklearn.linear_model import Perceptron
d = load_iris()
X = d.data[:100,:2]
y = d.target[:100]
m = Perceptron(
    max_iter=1000,
    random_state=1
)
m.fit(X,y)
print(m.predict([[5.1,3.5]]))
```
