19. BANK LOAN NAIVE BAYES

Question / Python Code

```
from sklearn.naive_bayes import GaussianNB
X = [
[20,50000],
[25,40000],
[35,60000],
[45,90000]
]
y = [0,0,1,1]
m = GaussianNB()
m.fit(X,y)
print(m.predict([[35,60000]]))
```
